PLEASE CONTINUE TO PRAY FOR THOSE AFFECTED BY COVID 19 AROUND THE WORLD

Globally, as of 26 July 2021, there have been 194,080,019 confirmed cases of COVID-19, including 4,162,304 deaths, reported to the World Health Organisation. A total of 3,696,135,440 vaccine doses have been administered.

For some people, coronavirus (COVID-19) can cause symptoms that last weeks or months after the infection has gone. This is sometimes called post-COVID-19 syndrome or "long COVID". How long it takes to recover from COVID-19 is different for everybody. Many people feel better in a few days or weeks and most will make a full recovery within 12 weeks. But for some people, symptoms can last longer. The chances of having long-term symptoms does not seem to be linked to how ill you are when you first get COVID-19. People who had mild symptoms at first can still have long-term problems. Please remember Long-Covid sufferers and their families in your prayers.

Please remember also, those still putting their lives at risk to help others – including NHS staff, Care Home Staff, Emergency Services workers

Please pray for those who are having to isolate, those who are anxious about the relaxation of Covid measures, those who have lost loved ones, and those who have died - that they may rest in peace.
